MWS-Master Welding Solutions

Founded in July 2015, MWS-Master Welding Solutions operates in three areas: integrated engineering solutions, industrial engineering and welding consulting, and training.

MWS aims to establish itself as a reference company in the development of equipment and structures related to industry and energy, be at the forefront of material joining technology, consolidate its presence in the global market for technical welding solutions, and also be a nationally and internationally recognized center for the training of welders and professionals in metallurgy.

To achieve this, its activity focuses on the design of special, energy-efficient equipment, tailored to the needs presented by customers, providing project and construction management services. MWS supports metal material transformation industries in the area of welding, by providing technical and human resources, and training/qualification of welding professionals with all the necessary theoretical and practical knowledge.

Through the implementation of this project, MWS intends to establish itself in the market as a relevant player in the provision of engineering services, technical inspection, and turnkey solutions for industries, disseminating and promoting its highly technological nature in the global market.

The project aims to provide MWS with the most technologically advanced operational conditions to be able to carry out its activity, actively contribute to improving national employability, and further increase the use of energy efficiency in industries.

With the implementation of this project, MWS intends to achieve the following post-project objectives: a turnover of 901,692.00 euros, gross value added of 796,237.19 euros, and the creation of six jobs.
